

Smart Cyber Intelligence

Our software platform provides real-time cyber intelligence to keep people, companies and assets safe from internal and external threats.

With real-time monitoring of hundreds of millions of messages each day, organisations can be quickly alerted to issues or threats – often before they happen.

Organisational threats ultimately come from people, not computers. External activists, malicious insiders, and careless employees all have the potential to cause damage and loss.

In contrast to Cyber Security solutions - which focus on protecting machines and networks - RepKnight's Smart Cyber Intelligence platform helps you identify potential threats outside of the firewall.

As a proactive step to discover and mitigate data breaches, RepKnight forms an important part of any GDPR compliance strategy.

Our application continuously searches social media, news feeds, blogs and the dark web, alerting you in real-time to anything that may become a threat – giving you valuable time to react and prevent it.

Accessible from any web browser, the RepKnight platform allows you to easily set up your own searches, and quickly analyse the results to discover items of interest.

RepKnight is used by many leading organisations to protect themselves from threats, IP theft, reputational damage, and financial loss.

Our Smart Cyber Intelligence solution supports a wide range of use cases:

- ❖ Critical event analysis
- ❖ Horizon scanning
- ❖ Competitive intelligence
- ❖ Asset protection
- ❖ Due diligence
- ❖ Reputational monitoring
- ❖ Brand protection
- ❖ Data leak detection
- ❖ Employee protection
- ❖ IP theft alerting
- ❖ Breach investigation

Search & Capture

Our solution constantly searches social media feeds, news sites, blogs and the dark web in real-time, capturing data that matches your search criteria.

With full firehose access, RepKnight can find a single message in over 500,000,000 tweets sent each day.

Analyse & Discover

With fast, intuitive point-and-click filtering, RepKnight lets you get rid of the clutter and noise.

Quickly filter your data set down, and zero in on what you're looking for – or discover something you weren't expecting.

Features

- ❖ Fully cloud-hosted Software As A Service (SaaS)
- ❖ Search across social media, blog and dark web data sources
- ❖ Find data in Tor, i2P, IRC, Pastebin, and many more
- ❖ Create complex search expressions without writing formulas
- ❖ Capture data sent from a specific location with Geofencing
- ❖ Fast, in-app, analysis with no need to switch windows
- ❖ Analyse conversations and networks within the data
- ❖ Filter the data set down with point-and-click filtering
- ❖ View followers, following, tweet history, linked media and URLs
- ❖ Set up email or SMS alerts when traffic spikes above a predefined threshold
- ❖ API for integration with advanced analytics
- ❖ Schedule regular reports at a time to suit you
- ❖ Share reports as PDF, or interactive HTML

Report & Alert

RepKnight can alert you to spikes in your data, in real-time, via SMS or by email – giving you time to respond.

With fully customisable drag-and-drop report templating, you can create meaningful reports personalised for your application and use case.
